Training

- **Beginners Courses (2 days)**

Basic tuning course to include: Learn how spot problems prior to tuning, get a general overview of what parameters to focus on and what changes they make, learn how and what to data log, general discussions on safe timing marks, safe correct air fuels for Naturally Aspirated, Supercharged/Turbo, and Nitrous injection. Dial in the low end and mid throttle driveability. Learn how to generate profit and understanding of your current and future equipment. Hands on Training

- **Advanced Courses (3 days)**

In depth discussions and hands on training on high hp naturally aspirated, supercharged/turbocharged, and heavily Nitrous injected engines. Focus on driveability for radical cam profiles, speed density tuning, E85 topics, and Methanol injection tuning. Must have the basic tuning course or equivalent for the advanced course.

Tuning Services

- **Onsite Contract Tuning**

Our Onsite Contract Tuning service is available to customers all around the world - from Dallas to Dubai, our expert tuners are available to come to your facility and perform tune after custom tune on your customer's vehicles. Typically our staff can tune from 10 to 15 vehicles per day, making for a very profitable couple of days for your shop.

- **Remote Tuning**

Remote tuning begins with us emailing over a custom tune based on the modifications you have performed. In addition to the tune, we send detailed instructions that outline exactly how to load the tune and datalog your vehicle. Using the data you gather from your vehicle through datalogging, we are able to dial in the tune for your specific combo so that it performs properly and has excellent drivability.

Who we are and what we do

Trinh Performance is a company that is focused on one thing - helping your business succeed and earn profits in the complex world of performance tuning. We do this by working with you as your consultants, first understanding your business and goals, and then teaching you about all of the tools that are available to help you achieve your goals.

There are literally dozens of products and gadgets on the market today that all claim to be the greatest tuning tools, and many are truly fantastic. Many can tune a wide range of vehicles, but none can do it all. There are a number of tools you can use to custom tune a Mustang GT or a Dodge Charger, but which ones are best for your business? Which can you make the most profits with? Which provide the best results and are easiest to use?

We provide training and ongoing technical support for the products you need to support your tuning business. We aim to help you focus your business on the tools that make the most sense for your particular business and avoid wasting time and money on the others that do not. We come to your shop and train you and your team, with a hands on approach, using the actual tools and software on actual customer vehicles. Perhaps the most important thing we do is remain at your disposal when you need us down the road.

How we help our clients

- We will show you how to effectively and properly tune cars to generate cash in your pocket and repeat customers.
- Generate more revenue. The more options you have to tune cars the less chance you have to lose a good customer.
- Our staff includes tuners and actual shop owners that can assist you and show you how to use the tools you have to expand your current business with ideas that actually work and will help your business grow and expand.
- Learn ways to troubleshoot and diagnose vehicles using your current software and the tools you currently have or plan to purchase.
- One thing that stands out about our company from most is our tuners are also ASE master certified "real world" technicians that use their skills to help in troubleshooting those difficult vehicles that you will come across.
- Whether it's a stock vehicle, heads/cam combo, supercharged, E85, turbocharged or nitrous injected vehicle - learn what works and what to use when adjusting timing curves, air fuel ratios to target, even as simple as plug choice and spark plug gaps.
- Learn not only how to make the most power, but how to achieve good driveability, whether it's a 300-rwhp car or a 1000-rwhp daily driver.
- Learn how to better communicate with your customers about their expectations and how to prepare them on future modifications that would benefit them and generate a solid customer relation that will benefit you in the future.

Our company offers training and ongoing remote assistance for multiple software. Whether it's AEM, HP Tuners, SCT, Diablo CMR, Big Stuff, Mega Squirt, DFI live, Utech, Cobb, Hondata, MEFI injection, and more – we can help!
